EXAMINER'S REASONS FOR ALLOWANCE:

The following is an examiner's statement of reasons for allowance:

The problems addressed by the process, interalia, are the over-evaporation of colloidal solution, resulting, e.g., in degradation of the colloidal solution in an evaporation zone and fouling of the equipment ; and under-evaporation of colloidal solution resulting, e.g., in the resultant article formed not being able to hold its desired shape. (See pages 1-2 of the specification).

The problems are solved according to the invention, interalia, by passing the colloidal solution through at least one orifices without substantially contacting the at least one inner surface of the evaporation zone (avoiding over-evaporation); and providing controlled evaporation of the colloidal solution by applying pressure allowing for flash evaporation and adjusting the pressure in said evaporation zone (avoiding under-evaporation).

Greigh et al (5,730,836), deemed to be the closest present prior art, does not pass a colloidal solution into at least one orifices of the evaporation zone wherein the solution does not substantially contact at least one inner surface of said zone.

While the process of Williams (4,414,341) passes a polymer solution through an orifice and employs controlled evaporation by adjusting temperature, it does not, however, control by applying pressure in the evaporation zone that is lower than the vapor pressure of the colloidal solution allowing for flash evaporation of an amount of at

least a portion of at least one volatile component from said colloidal solution ;and
adjusting the pressure in said evaporation zone.,

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
